Learn UI/UX
Design in 2023

1

Master Tool

It necessary is to master crucial design tools. Mainly I'm talking about prototyping (Figma), but we can mentioned also others for documentation (ClickUp), etc.

Figma
Prototyping, wireframes, research,etc

ClickUp
Planning, documentation, research, etc.

Smartlook
Analytics, heatmaps, funnels, etc.

Protopie
Advanced prototyping & interactions

2

Design Process

Understanding the design thinking process is important to set a user-centric mindset and designing products, which will be loved by people.

Emphatise

Define

**Ideate**

Prototype

Test

Implement

3

Principles

Design is a creative industry, but you have to still follow some best practices, principles, standards tested over the years. These are some of the UI design crucial ones:

Typography	Buttons
Typography	Forms & inputs
Iconography	iOS & android native
Images & Illustrations	Responsive design
Spacing & Grids	Base artboard size
Navigations	Design system

4

Mentor

Receiving constructive feedback and answering your questions can rapidly speed up the learning process. Also, it can help to be active in the design community on socials.

> Your portfolio looks good, but rather than including a large number of separated screens, show more comprehensive case studies to show you're able to deliver product design from A-Z.

5

Practice

It's actually trough mistakes you can grow! For that, you must practice problem-solving with a high focus on delivering end solutions (prototypes, testing reports, research deliverables, etc.)
