Documatic

Documatic is a document generation tool that helps developers create, manage, and automate the generation of various documents such as contracts, invoices, and reports.

It streamlines the document creation process, reduces manual work, and ensures consistency in document formats.

`creating invoices` `producing reports`

`Generating legal contracts`

Gitpod

Gitpod is an online development **environment** that allows developers to create, manage, and share fully **pre-configured** development environments using Git repositories.

G Gitpod - Always ready to code
✔ gitpod.io
★★★★★ 51 ⓘ | **Developer Tools** | 60,000+ users

It provides a **consistent** and **accessible** development environment for collaborating with team members and working on projects **without** the need for **local setup**.

`setup of development environments`

`Collaborative coding`

`testing code in isolated setups`

Postman

Postman is a **collaboration** platform for **API development** that simplifies the process of designing, testing, and documenting APIs.

The future is API-first

At Postman, we believe the future will be built with APIs. The API-first World graphic novel tells the story of how and why the API-first world is coming to be.

Read the Graphic Novel

It streamlines API development, testing, and debugging, making it easier to work with APIs and ensure their functionality.

`automating API testing`

`Developing and testing APIs`

`documenting API endpoints`

`better API communication and usage`

Docz

Docz is a documentation tool for creating beautiful and interactive component-based documentation for your projects.

It simplifies the process of documenting your code and project components, making it easier for developers to understand and collaborate.

`APIs` `libraries` `better code understanding`

`component-based projects` `team collaboration`

Supabase

Supabase is an open-source **backend-as-a-service** (BaaS) platform that allows developers to **build databases** and **APIs** without the need for server-side code.

It provides a scalable and easy-to-use backend solution for web and mobile applications, reducing the development time and effort.

`managing data w/o server management overhead`

`web and mobile applications`   `robust backend`

`real-time applications`
